High-Quality Season's Greetings

TAMPON PRINT

A template of the logo is made and filled with the desired colour of ink. Then the colour is transferred directly onto the article with a silicone pad. As this pad is made of flexible silicone, almost all surfaces can be printed – including uneven surfaces.

LASER ENGRAVING

A method using a laser beam to engrave a logo into nearly any material. A computer-controlled process ensures a pinpoint reproduction. The final result is always dependent on the material surface. A colour replica is not possible.

EMBROIDERY

A digitally controlled process in which a computer steers a needle and thread to embroider a surface. As many as 10 colours can be used in one embroidery procedure. This robust form of refinement can be used on all textiles. The logo must be provided in order to determine the number of stitches and perform an accurate cost calculation.

EMBOSSING

A stamp is used to press a logo into the surface of an article. Coloured and metal-looking (in gold and silver) embossing are possible through special foils. This technique is mostly used on leather and synthetic leather products.

TRANSFER PRINT

A heat press, consisting of a heating plate and base plate, is used to apply the logo/ picture/ text, pre-printed on thermal paper, onto the item. Beforehand, the thermal paper was imprinted through silkscreen or direct print.

SILKSCREEN PRINT | TEXTILE PRINTING

For silkscreen print, a screen is made impermeable in areas not to be printed through a photochemical process. The promotional item is placed under the screen and printed on the areas where the screen is permeable. The colour is pushed through the holes and applied to the product. When using coloured logos it is recommended to add a white base coat to ensure brilliant colours. This method is ideal for flat surfaces, such as textiles or segments of umbrellas.

DOMING

The doming sticker is made of synthetic resin and a sticker with the company logo. The clear resin is fitted precisely to the logo print, protects the print, and gives the logo a 3D effect. The convex sticker is perfect for advertising on rough or hard materials, such as umbrella handles.

MAKE A GOOD IMPRESSION!

Your logo or slogan sends a message and individualises your advertising medium. There are many ways to advertise your name. Below each product description you can see what type of finishing and which size is best for your advertising medium.

DIRECT PRINT

With direct print, single drops of ink are fired through nozzles directly onto the item or paper (similar to an inkjet printer). Normally, colours that dry with UV light are used for high brilliance. Suitable for low quantities and flat items.

DIGITAL TRANSFER

Digital transfer works in two steps. First, a special thermo paper is imprinted digitally (see passage „direct print“) and cut to size. In a second step, the logo / picture / text is then printed onto the product under pressure in a heat press.

360° ENGRAVING

Engraving 2.0: the 360° engraving offers limitless possibilities. Thanks to a rotating device, the advertising message can be engraved in a radius of 360° on the product. It will be an all around eyecatcher! This method is particularly suitable for round, cylindrical, or conical products like travel mugs.
